

# Sea-Intelligence – Press Release (Oct 5<sup>th</sup>, 2023)

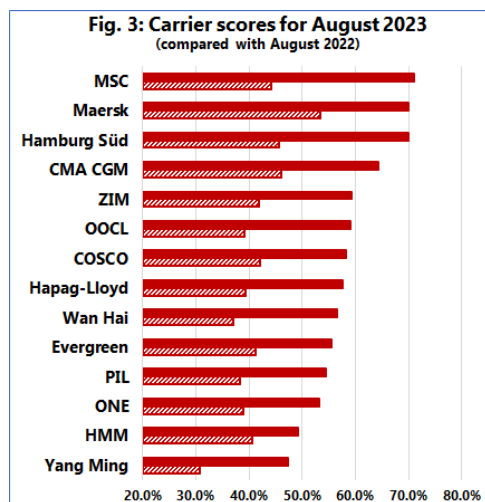

[www.Sea-Intelligence.com](http://www.Sea-Intelligence.com)

## Schedule reliability continues to stay within a narrow range

Sea-Intelligence has published issue 145 of the *Global Liner Performance (GLP) report*, with schedule reliability figures up to and including August 2023. As the report itself is quite comprehensive and covers schedule reliability across 34 different trade lanes and 60+ carriers, this press release will only cover the global highlights from the full report.

Global schedule reliability declined by -0.9 M/M in August 2023 to 63.2%. Barring the increase in May, schedule reliability has been ranging within 2 percentage points since March 2023. On a Y/Y level, schedule reliability was 17.0 percentage points higher. The average delay for LATE vessel arrivals increased by 0.07 days M/M to 4.67 days. Despite the M/M increase, the average delay for LATE vessel arrivals is still -1.23 days better off than at the same point last year.

With 70.9% schedule reliability in August 2023, MSC was the most reliable top-14 carrier, followed closely by Maersk and Hamburg Süd with 70.0%. CMA CGM was the only carrier with schedule reliability of 60%-70%. 8 of the remaining carriers had schedule reliability of 50%-60%, with HMM and Yang Ming under 50%; the latter the least reliable at 47.3%. Only 3 of the top-14 carriers recorded a M/M increase in August 2023, with OOCL recording the largest increase of 2.8 percentage points. On a Y/Y level, all 14 carriers recorded double-digit improvements, with MSC recording the largest improvement of 26.8 percentage points.
